EXECUTIVE SUMMARY

Full Stack Developer with 3+ years of experience building and optimizing enterprise-scale system at Infosys for Mercedes-Benz Japan. Skilled in React, Next.js, Node.js, MongoDB, and AWS. Improved API performance by 20% and contributed to production-grade backend features across a large enterprise codebase. Committed to building intelligent software solution that have real impact, long-term value in the market.

EDUCATION

Post-Graduate Certificate, Web Development

Sept 2024 - Dec 2025

Conestoga College, Kitchener, ON

GPA: 3.6

Bachelor of Technology, Information Technology

Aug 2017 - Apr 2021

Anna University, Chennai, India

GPA: 3.5

SKILLS & ABILITIES

Languages

Java, JavaScript (ES6+), TypeScript, Python, SQL, Dart

Frontend

React, Next.js, Material UI, Bootstrap, Responsive Design, SEO

Backend & API

Node.js, Express.js, REST APIs, GraphQL, MVC Architecture, Microservices

Database

MongoDB, Firebase, Firestore, SQL Server

Architecture & Patterns

Agile/Scrum, Clean Architecture, Modular Design, OOP Principles

Testing & Quality

Jest, Selenium, Pytest, Postman API Testing

Tools & Platforms

Git & GitHub, GitLab, Docker, AWS, Vercel, DigitalOcean, Render

Cloud & DevOps

AWS (EC2, Lambda, S3, ECS, DynamoDB, VPC), Docker, Vercel, DigitalOcean

PROFESSIONAL EXPERIENCE

Senior Systems Engineer

Oct 2023 – Aug 2024

Infosys Limited – Mercedes Benz Japan

Chennai, India (Hybrid)

Tech: Node.js, Express, SQL, MongoDB, JIRA, SAP ERP, SAP GRC

- Resolved a critical data-integrity defect causing chassis-number mismatch between the Dealer Portal (16-digit) and SAP backend (12-digit) by implementing the code fix, executing UAT, and deploying to production.
- Optimized dealer detail API endpoints by implementing database indexing and response payload filtering and achieved 20% faster data retrieval in the DFE portal.
- Led a root cause analysis (RCA) on 5+ critical production issues, implemented permanent fixes, and orchestrated production deployments ensuring system stability
- Administered role-based access control (RBAC) via SAP GRC for 300+ internal/external users, ensuring continuous compliance and secure system access.

Systems Engineer

Sept 2021 – Sept 2023

Tech: SAP SD, MM, FI, MongoDB, ServiceNow

- Improved system stability by resolving incidents within strict SLAs (95% compliance), reducing average resolution time by 15%.
- Performed root cause identification and documented 20+ recurring issues, enabling proactive mitigation and continuous support.
- Managed and deployed monthly patch updates for a Dealer Frontend Portal (DFE), proactively monitored to ensure seamless data flow and 100% availability for critical B2B operations.

PROJECTS – CONESTOGA COLLEGE

MarineCare – AI-Powered Shoreline Cleanup Platform (Progressive Web App)

Dec 2025

Tech Stacks: React 19, Next.js, Node.js, Express, MongoDB, Firebase Auth, Material UI, Hugging Face, DigitalOcean
A PWA enabling volunteers to join shoreline cleanup challenges, track impact, upload evidence, and classify waste using AI. (**Project Showcase Runner-up at Communitech, Kitchener**)

- **Implemented secure authentication** including Google Sign-In using Firebase Client and Admin SDK with access/refresh tokens, session lifecycle management, global state handling, and fully protected routing.
- **Added backend security hardening** with rate limiting on authenticated endpoints, input sanitization, and scalable modular architecture patterns to improve API reliability and prevent abuse.
- **Integrated Hugging Face ViT image-classification model** to perform real-time waste detection and category prediction from uploaded images.
- **Developed interactive real-time dashboards** showing user progress, leaderboard rankings, cleanup metrics, and nationwide environmental impact statistics.
- **Built geo-fencing and location-based access control** using the Browser Geolocation API and waterbody proximity to restrict challenge participation outside designated cleanup zones.

Task Manager & Recreation Zone – A Modern Full Stack Application

Aug 2025

Tech Stacks: React 19, Router, Vite, Node.js, Express, GraphQL, MongoDB, Firestore, Firebase Auth, Vercel

A task management system paired with an AI-driven recreation zone featuring advanced game logic.

- **Architected a full-stack system** using Node.js, Express, GraphQL, and MongoDB Atlas with deployed frontend on Vercel for scalable, and hosted backend on render for low-latency API delivery.
- **Built an AI-driven Tic-Tac-Toe engine** using the Minimax algorithm with optimized decision trees, delivering unbeatable “Hard Mode” intelligence and multi-level game difficulty options.
- **Engineered modern React 19 architecture** with custom hooks, Context API, compound components, and memoization techniques to enhance performance and streamline state orchestration.
- **Designed a hybrid data layer** using MongoDB for CRUD operations and Firestore for real-time listener-based statistics, leveraging connection pooling to minimize serverless cold-start latency.

Craftique- A Flutter Cross Platform Ecommerce Application

June 2025

Tech Stacks: Flutter, Dart, Provider Pattern, Firebase suite, Material Design UI

A Mobile e-commerce application built with Flutter, made for handcrafted products with full ecommerce features.

- **Built advanced multi-screen UI/UX flows**—including splash, authentication, product listing, details, cart, checkout, and order confirmation—using custom widgets, glass morphism, animations.
- **Integrated multi-service Firebase suite** with stream-based listeners, supporting persistent sessions, error-resilient login flows, and cross-platform device support.
- **Implemented production-ready full eCommerce features** such as category-based product filtering, dynamic price calculations (subtotal, tax, shipping), and checkout with form validation.

CERTIFICATIONS

- **AWS Cloud Practitioner** - June 2025
- **IBM- Artificial Intelligence Foundations** – Oct 2025
- **IBM- Cyber Security Foundations** – Oct 2025
- **IBM- Data Fundamentals** – Nov 2025
